---	--

Mary was diagnosed with Acute Myelogenous Leukemia (AML) in November of 2007 and since has spent approximately 140 days in the hospital receiving chemotherapy, full body radiation and most recently a double transplant. Due to the intensity of the treatment, the side effects make work impossible which is a financial challenge. Mary has a devoted husband, Tom, daughter, Kelli and son, Dan. Mary's current regimen includes daily trips to the U of M for blood tests, infusions and monitoring for possible rejection of her newly received cells.

**A \$10.00 donation/person at the door entitles you to a spaghetti dinner, provided by Decoy's**  
**Please join us for an event filled with good food, fun, great music, games, raffles, silent and live auctions.**

**Donations can be made directly at any Central Bank location:**  
**Central Bank, Attn: Judie/Benefit for Mary Brown, 3670 E. Cty. Line, White Bear Lake, MN 55110**

**Mary and her family have asked that a portion of the proceeds be donated to**  
**the Leukemia & Lymphoma Society.**

**For more information please inquire at [benefit4mary@yahoo.com](mailto:benefit4mary@yahoo.com).**

Approximately 13,410 (0.004%) of Americans were diagnosed with Acute Myelogenous Leukemia (AML) in 2007. The chance of getting AML increases with age. However, children and adults of any age can develop AML. About one in five children with leukemia has AML. The goal of treatment for AML is to bring about a remission or to cure the disease.
